**allied health science degree: Ensuring Quality Cancer Care Through the Oncology Workforce** Institute of Medicine, National Cancer Policy Forum, 2009-04-28 The American Society of Clinical Oncology (ASCO) predicts that by 2020, there will be an 81 percent increase in people living with or surviving cancer, but only a 14 percent increase in the number of practicing oncologists. As a result, there may be too few oncologists to meet the population's need for cancer care. To help address the challenges in overcoming this potential crisis of cancer care, the National Cancer Policy Forum of the Institute of Medicine (IOM) convened the workshop Ensuring Quality Cancer Care through the Oncology Workforce: Sustaining Care in the 21st Century in Washington, DC on October 20 and 21, 2008.

Yet, they are among the least studied elements of our health care system. This book describes the forces that drive the demand for and the supply of allied health practitioners—forces that include demographic change, health care financing policies, and career choices available to women. **allied health science degree: Dr. Arthur Spohn** Jane Clements Monday, Frances Brannen Vick, 2018-09-12 In this first comprehensive biography of Dr. Arthur Edward Spohn, authors Jane Clements Monday, Frances Brannen Vick, and Charles W. Monday Jr., MD, illuminate the remarkable nineteenth-century story of a trailblazing physician who helped to modernize the practice of medicine in Texas. Arthur Spohn was unusually innovative for the time and exceptionally dedicated to improving medical care. Among his many surgical innovations was the development of a specialized tourniquet for “bloodless operations” that was later adopted as a field instrument by militaries throughout the world. To this day, he holds the world record for the removal of the largest

tumor—328 pounds—from a patient who fully recovered. Recognizing the need for modern medical care in South Texas, Spohn, with the help of Alice King, raised funds to open the first hospital in Corpus Christi. Today, his name and institutional legacy live on in the region through the Christus Spohn Health System, the largest hospital system in South Texas. This biography of a medical pioneer recreates for readers the medical, regional, and family worlds in which Spohn moved, making it an important contribution not only to the history of South Texas but also to the history of modern medicine.

**allied health science degree: *A Framework for Educating Health Professionals to Address the Social Determinants of Health*** National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Board on Global Health, Committee on Educating Health Professionals to Address the Social Determinants of Health, 2016-10-14 The World Health Organization defines the social determinants of health as the conditions in which people are born, grow, work, live, and age, and the wider set of forces and systems shaping the conditions of daily life. These forces and systems include economic policies, development agendas, cultural and social norms, social policies, and political systems. In an era of pronounced human migration, changing demographics, and growing financial gaps between rich and poor, a fundamental understanding of how the conditions and circumstances in which individuals and populations exist affect mental and physical health is imperative. Educating

health professionals about the social determinants of health generates awareness among those professionals about the potential root causes of ill health and the importance of addressing them in and with communities, contributing to more effective strategies for improving health and health care for underserved individuals, communities, and populations. Recently, the National Academies of Sciences, Engineering, and Medicine convened a workshop to develop a high-level framework for such health professional education. A Framework for Educating Health Professionals to Address the Social Determinants of Health also puts forth a conceptual model for the framework's use with the goal of helping stakeholder groups envision ways in which organizations, education, and communities can come together to address health inequalities.

This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. **allied health science degree: In the Nation's Compelling Interest** Institute of Medicine, Board on Health Sciences Policy, Committee on Institutional and Policy-Level Strategies for Increasing the Diversity of the U.S. Health Care Workforce, 2004-06-29 The United States is rapidly transforming into one of the most racially and ethnically diverse nations in the world. Groups commonly referred to as minorities-including Asian Americans, Pacific Islanders, African Americans, Hispanics, American Indians, and Alaska Natives-are the fastest growing segments of the population and emerging as the nation's majority. Despite the rapid growth of racial and ethnic minority groups, their representation among the nation's health professionals has grown only modestly in the past 25 years. This alarming disparity has prompted the recent creation of initiatives to increase diversity in health professions. In the Nation's Compelling Interest considers the benefits of greater racial and ethnic diversity, and identifies institutional and policy-level mechanisms to garner broad support among health professions leaders, community members, and other key stakeholders to implement these strategies. Assessing the potential benefits of greater racial and ethnic diversity among health professionals will improve the access to and quality of healthcare for all Americans.

**allied health science degree: Strength Coaching in America** Jason P. Shurley, Jan Todd, Terry Todd, 2019-12-13 It's hard to imagine, but as late as the 1950s, athletes could get kicked off a team if they were caught lifting weights. Coaches had long believed that strength training would slow down a player. Muscle was perceived as a bulky burden; training emphasized speed and strategy, not "brute" strength. Fast forward to today: the highest-paid strength and conditioning coaches can now earn \$700,000 a year. Strength Coaching in America delivers the fascinating history behind this revolutionary shift. College football represents a key turning point in this story, and the authors provide vivid details of strength training's impact on the gridiron, most significantly when University of Nebraska football coach Bob Devaney hired Boyd Epley as a strength coach in 1969. National championships for the Huskers soon followed, leading Epley to launch the game-changing National Strength Coaches Association. Dozens of other influences are explored with equal verve, from the iconic Milo Barbell Company to the wildly popular fitness magazines that challenged physicians' warnings against strenuous exercise. Charting the rise of a new athletic profession, Strength Coaching in America captures an important transformation in the culture of American sport.
