altitude physical therapy longmont: Beta maritima enrico biancardi, Leonard W. Panella, Robert T. Lewellen, 2011-12-07 Along the undisturbed shores, especially of the Mediterranean Sea and the European North Atlantic Ocean, is a quite widespread plant called Beta maritima by botanists, or more commonly sea beet. Nothing, for the inexperienced observer's eye, distinguishes it from surrounding wild vegetation. Despite its inconspicuous and nearly invisible flowers, the plant has had and will have invaluable economic and scientific importance. Indeed, according to Linnè, it is considered the progenitor of the beet crops possibly born from Beta maritima in some foreign country. Recent molecular research confirmed this lineage. Selection applied after domestication has created many cultivated types with different destinations. The wild plant always has been harvested and used both for food and as a medicinal herb. Sea beet crosses easily with the cultivated types. This facilitates the transmission of genetic traits lost during domestication, which selection processes aimed only at features immediately useful to farmers and consumers may have depleted. Indeed, as with several crop wild relatives, Beta maritima has been successfully used to improve cultivated beet's genetic resistances against many diseases and pests. In fact, sugar beet cultivation currently would be impossible in many countries without the recovery of traits preserved in the wild germplasm. Dr. Enrico Biancardi graduated from Bologna University. From 1977 until 2009, he was involved in sugar beet breeding activity by the Istituto Sperimentale per le Colture Industriali (ISCI) formerly Stazione Sperimentale di Bieticoltura (Rovigo, Italy), where he released rhizomania and cercospora resistant germplasm and collected seeds of Mediterranean sea beet populations as a genetic resource for breeding and ex situ conservation. Retired since 2009, he still collaborates with several working breeders, in particular, at the USDA Agricultural Research Stations, at the Chinese Academy of Agricultural Science (CAAS), and at the Athens University (AUA). He has edited books, books chapters and authored more than 150 papers. Dr. Lee Panella is a plant breeder and geneticist with the USDA-ARS at Fort Collins, Colorado. He earned his B.S. in Crop and Soil Science from Michigan State University, an M.S. in Plant Breeding from Texas A&M University, and a Ph.D. in genetics from the University of California at Davis. His research focus is developing disease resistant germplasm using sugar beet wild relatives. He is chairman of the USDA-ARS Sugar Beet Crop Germplasm Committee and has collected and worked extensively with sea beet. Dr. Robert T. Lewellen was raised on a ranch in Eastern Oregon and obtained a B.S. in Crop Science from Oregon State University followed by a Ph.D. from Montana State University in Genetics. From 1966 to 2008 he was a research geneticist for the USDA-ARS at Salinas, California, where he studied the genetics of sugar beet and as a plant breeder, often used sea beet as a genetic source to produce many pest and disease resistant sugar beet germplasm and parental lines, while authoring more than 100

publications.

altitude physical therapy longmont: Cannabis in Medicine Kenneth Finn, 2020-07-09 Legalization of marijuana is becoming increasingly prominent in the United States and around the world. While there is some discussion of the relationship between marijuana and overall health, a comprehensive resource that outlines the medical literature for several organ systems, as well as non-medical societal effects, has yet to be seen. While all physicians strive to practice evidence-based medicine, many clinicians aren't aware of the facts surrounding cannabis and are guided by public opinion. This first of its kind book is a comprehensive compilation of multiple facets of cannabis recommendation, use and effects from a variety of different perspectives. Comprised of chapters dedicated to separate fields of medicine, this evidence-based guide outlines the current data, or lack thereof, as well as the need for further study. The book begins with a general overview of the neurobiology and pharmacology of THC and hemp. It then delves into various medical concerns that plague specific disciplines of medicine such as psychiatry, cardiology, gastrointestinal

and neurology, among others. The end of the book focuses on non-medical concerns such as public health and safety, driving impairment and legal implications. Comprised of case studies and meta-analyses, *Cannabis in Medicine: An Evidence-Based Approach* provides clinicians with a concise, evidence-based guide to various health concerns related to the use of marijuana. By addressing non-medical concerns, this book is also a useful resource for professionals working in the public health and legal fields.

altitude physical therapy longmont: **Society and the Environment** Michael Carolan, 2018-05-15 Society and the Environment examines today's environmental controversies within a socio-organizational context. After outlining the contours of 'pragmatic environmentalism', Carolan considers the pressures that exist where ecology and society collide, such as population growth and its associated increased demands for food and energy. He also investigates how various ecological issues, such as climate change, are affecting our very own personal health. Finally, he drills into the social/structural dynamics (including political economy and the international legal system) that create ongoing momentum for environmental ills. This interdisciplinary text features a three-part structure in each chapter that covers 'fast facts' about the issue at hand, examines its wide-ranging implications, and offers balanced consideration of possible real-world solutions. New to this edition are 'Movement Matters' boxes, which showcase grassroots movements that have affected legislation. altitude physical therapy longmont: **The Laser That's Changing the World** Todd Neff, 2018 Tells the story of a laser technology that will have a big impact on society and the brilliant innovators responsible for its development Lidar--a technology evolved from radar, but using laser light rather than microwaves--has found an astounding range of applications, none more prominent than its crucial role in enabling self-driving cars. This accessible introduction to a fascinating and increasingly vital technology focuses on the engaging human stories of lidar's innovators as they advance and adapt it to better understand air, water, ice and Earth - not to mention mapping Mars and Mercury, spotting incoming nuclear warheads, and avoiding pedestrians and cyclists on city

streets. Award-winning science writer Todd Neff invites readers behind the scenes to meet some of the great innovators who have explored and expanded the uses of this amazing technology: people like MIT scientist Louis Smullin, whose lidar bounced light off the moon soon after the laser's invention; Allan Carswell, who plumbed the shallows of Lake Erie en route to developing the aerial lidar now essential for coastal mapping and hurricane damage assessment; Red Whittaker, the field robotics pioneer who was putting lidar on his autonomous contraptions as early as the 1980s; and David Hall, whose laser sombrero on a Toyota Tundra gave birth to modern automotive lidar. These are just some of the stories Neff tells before looking ahead to a future that could bring lidar to unpiloted air taxis, to the contaminated pipes of the U.S. nuclear weapons complex, and to satellites capable of pinpointing greenhouse gas sources from orbit. As the author makes clear, the sky is no limit with lidar, which promises to make our world safer, healthier, and vastly more interesting.

Plaque buildup in the arteries causes atherosclerosis; luckily, however, through knowledge of our bodies and making small and large changes in the way we live, this deadly condition can be stopped and even reversed. Dare to Live, by author and naturopathic doctor Stephen W. Parcell, brings to the forefront natural, preventive, and medically proven strategies for combating coronary artery disease and its effect on our lives. This is not a diet book or an attempt to push a new fad; Dare to Live is a first-of-its-kind look at atherosclerosis from the naturopathic medical standpoint. Rather than just telling us what to do, Parcell presents in language accessible to everyone the causes of the disease, the rationale behind assessing risk for it, the purpose of the various tests he recommends, and the scientific evidence behind his recommendations. Understanding what our bodies are trying to tell us is the first big step in preventing heart disease, and the next big step-acting on our knowledge-can teach us more than we might believe possible. By pursuing natural, scientific methods, we can keep health close to our hearts and keep a major killer away from ourselves and our loved ones.

altitude physical therapy longmont: A Beard Cut Short Todd Neff, 2020-12-09 John Rubadeau's long, white beard; homeless-guy wardrobe; and penchant for dirty jokes belied his lofty status as one of the most popular professors ever at the University of Michigan. He taught writing in Ann Arbor for more than 30 years. The cover of his course pack read: "Grammar: the difference between knowing your shit and knowing you're shit." In A Beard Cut Short: The life and lessons of a legendary professor clipped by a slip of #MeToo, a former student tells the crazy, touching, inspiring, and often funny life story of an eccentric, influential professor. John caught dogs in Wisconsin, sold insurance in Indiana, raised pigs in Tennessee, counseled soldiers in Germany, and had his apartment bugged by the Romanian secret police. He lost a young wife and two baby boys. He was born poor and stayed that way most of his life. But, on his own terms, he met with extraordinary success. A Beard Cut Short also shares John's key lessons on writing, teaching, and life - lessons that have inspired generations of students to watch out for comma splices and follow their dreams. The story is capped by an investigation of an unjust firing that's a case study in how the misappropriation of #MeToo, a vital social movement, can hurt both the unfairly accused and the movement itself. John Rubadeau's (in)famous Grammar Review is included as a special bonus.

Reviews: Rubadeau was an outspoken man of a previous era who taught so long the culture changed around him. As a result, the book is a captivating document on how the language of teaching (and language itself) has changed over the decades, and the ways in which a certain type of larger-than-life educator, once common, has mostly ceased to exist. — Kirkus Former Camera science writer and Colorado Book Award winner ("From Jars to the Stars") Todd Neff examines the life of his mentor, former University of Michigan Professor John Rubadeau, before plunging in to investigate the unjust #MeToo claims that led to his firing in "A Beard Cut Short: The Life and Lessons of a Legendary Professor Clipped by a Slip of #MeToo." Rubadeau was an old-school writing teacher who fearlessly created room for students to discuss and debate human differences in the classroom, refusing to coddle or protect them, an effort doomed to fail. "I am here to teach you about the intricacies and nuances of the English language not to coddle you or to support your conviction that you are the next Shakespeare," Rubadeau informed his students. "If you will be devastated because you receive less than an A in this course, drop this class the first day." Using his investigative skills to obtain confidential documents, Neff concludes that his mentor's firing "came about through a poisonous brew of stubbornness, incompetence, misplaced zealotry, hypersensitivity, blinkered perspective, bad faith, personal friction, professional jealousy, and shoddy investigative work — all of which led to over-reaction and injustice." — The Boulder Daily Camera

altitude physical therapy longmont: *Pulmonary Function Testing* David A. Kaminsky, Charles G. Irvin, 2019-01-05 This book serves as a unique, comprehensive resource for physicians and scientists training in pulmonary medicine and learning about pulmonary function testing. Pulmonary function testing and the physiological principles that underlie it are often poorly understood by medical students, residents, fellows and graduate students training in the medical sciences. One reason is that students tend to get overwhelmed by the basic mathematical descriptions that explain the working of the respiratory system and the principles of pulmonary function testing. Another reason is that too many approaches focus on the math without explaining the clinical relevance of these principles and the laboratory testing that enables us to measure the very lung function that these principles are describing. This book answers that need by providing a series of chapters that guide the reader in a natural order of learning about the respiratory system. In particular, after a general overview of the structure-function design of the lung and the history of pulmonary function testing, authors begin with the drive to breathe, and then follow the pathway of air as it is drawn into the lung, undergoes gas exchange, and is then exhaled back out again. Each chapter focuses on the key principles and corresponding pulmonary function tests that explain each step in this pathway. Each chapter is written by at least two experts, one with expertise in the underlying physiology, and the other with expertise in the clinical testing and application of pulmonary function testing in practice. Many figures and tables highlight key points, and multiple case studies in each section provide specific examples of the clinical application of each pulmonary function test. This is an ideal guide to pulmonary function tests for practicing pulmonologists, residents, fellows, and medical students.

altitude physical therapy longmont: *From Jars to the Stars* Todd Neff, 2016-01-01 How did a company best known for its glass jars hit a comet 83 million miles away? The answer involves technical expertise, heroic dedication, an industrial giant's push to modernize, Hitler's V-2 rocket, speakers destined for a Hall & Oates summer concert tour, and the search for life's origins. In "From Jars to the Stars: How Ball Came to Build a Comet-Hunting Machine," award-winning science journalist Todd Neff presents an inside look at the backgrounds and motivations of the men and women who actually create the spacecraft on which the American space program rides. A timeless story of science, engineering, politics and business strategy intertwining to bring success in the brutal business of space, "From Jars to the Stars" is a lively account of one of mankind's great

modern achievements. It is a story about people, foremost those on the Deep Impact mission, which smashed a spacecraft into the comet Tempel 1. "From Jars to the Stars" explores the improbable beginnings of Ball Aerospace & Technologies Corp., which built the comet hunter, and the evolution of the American space agency that funded it. The book begins with the story of a group of University of Colorado students who built a "sun seeker" for the noses of sounding rockets studying the home star. The pathbreaking device sparked the creation and development of both Ball Aerospace and the University of Colorado's formidable Laboratory for Atmospheric and Space Physics. "From Jars to the Stars" describes how Ed Ball, president of the Ball Brothers Company of Muncie, Indiana, ended up owning a space business in Boulder, Colorado, through a combination of strategic intent and serendipity. Neff explores the personalities and the technologies behind Ball's pioneering spacecraft, the Orbiting Solar Observatory launched in 1962. The Ball orbiter prepares the ground for Deep Impact, showing readers how much—and how little—changed across four decades of American space exploration. Neff goes on to show how Ball Aerospace evolved into an organization capable of building seven Hubble Space Telescope instruments as well as the comet hunter at the center of the story. The author describes the development of the American space enterprise as it went from emphasizing big-budget "gigabuck" missions to "faster, better, cheaper" spacecraft of the sort Ball specialized in. Neff pays special mind to NASA's Jet Propulsion Laboratory, the world leader in interplanetary space exploration and Ball's partner on Deep Impact. It was often a rocky marriage. Throughout, Neff makes clear that robotic space missions are indeed manned: the people just happen to stay on the ground.

altitude physical therapy longmont: *Toxicological Profile for Carbon Monoxide* U.S. Department of Health and Human Services, 2014-01-22 This toxicological profile is prepared in accordance with guidelines developed by the Agency for Toxic Substances and Disease Registry (ATSDR) and the Environmental Protection Agency (EPA). The original guidelines were published in the Federal Register on April 17, 1987. Each profile will be revised and republished as necessary. The ATSDR toxicological profile succinctly characterizes the toxicologic and adverse health effects information for the toxic substances each profile describes. Each peer-reviewed profile identifies and reviews the key literature that describes a substance's toxicologic properties. Other pertinent literature is also presented but is described in less detail than the key studies. The profile is not intended to be an exhaustive document; however, more comprehensive sources of specialty information are referenced. The profiles focus on health and toxicologic information; therefore, each toxicological profile begins with a public health statement that describes, in nontechnical language, a substance's relevant toxicological properties. Following the public health statement is information concerning levels of significant human exposure and, where known, significant health effects. A health effects summary describes the adequacy of information to determine a substance's health effects. ATSDR identifies data needs that are significant to protection of public health. Each profile: (A) Examines, summarizes, and interprets available toxicologic information and epidemiologic evaluations on a toxic substance to ascertain the levels of significant human exposure for the substance and the associated acute, subacute, and chronic health effects; (B) Determines whether adequate information on the health effects of each substance is available or being developed to determine levels of exposure that present a significant risk to human health of acute, subacute, and chronic health effects; and (C) Where appropriate, identifies toxicologic testing needed to identify the types or levels of exposure that may present significant risk of adverse health effects in humans.

altitude physical therapy longmont: *Brotherhood of the Screaming Abyss* Dennis McKenna, 2023-02-21 *Brotherhood of the Screaming Abyss: My Life with Terence McKenna*, is an autobiographical account of renowned ethnobotanist Dennis McKenna's childhood, his relationship with his brother, and the author's experiences with and reflections on psychedelics, philosophy, and scientific innovation. Chronicling the McKenna brothers' childhood in western Colorado during the 1950s and 1960s, Dennis writes of his adolescent adventures including his first encounters with alcohol and drugs (many of which were facilitated by Terence), and the people and ideas that shaped them both. *Brotherhood of the Screaming Abyss* weaves personal narrative through philosophical ideas and tales of psychedelic experimentation. In this book, Dennis describes these inquiries with the wisdom of perspective. In his account of what has become known as The Experiment at La Chorrera-- which Terence documented in his own 1989 book, *True Hallucinations* -- Dennis describes how he had visions of merging mushroom and human DNA, the brothers' predictions for the future, and their evolving ideas about society and consciousness. He also offers an intellectual understanding of the hallucinogenic effects of high-dose psychedelic mushrooms and other psychedelic substances. Dennis, now world-renowned for this ethnobotanical work, describes in *Brotherhood* his early interests in cosmology and astrology, his sometimes rocky relationship with his older brother and how their paths diverged later in their lives. Dennis describes his academic career in between touching accounts of both his mother's and Terence's battles with cancer. In the 10th Anniversary edition of *Brotherhood*, Dennis reflects on scientific revelations, climate change, and the social and political crises of our time. The new edition also features both the original foreword by Luis Eduardo Luna and a new foreword by Dr. Bruce Damer. *Brotherhood of the Screaming Abyss* is a story about brotherhood, psychedelic experimentation, and the intertwining nature of science and myth.
