education circle cambridge ma: Education and Equality Danielle Allen, 2018-02-09 American education as we know it today—guaranteed by the state to serve every child in the country—is still less than a hundred years old. It's no wonder we haven't agreed yet as to exactly what role education should play in our society. In these Tanner Lectures, Danielle Allen brings us much closer, examining the ideological impasse between vocational and humanistic approaches that has plagued educational discourse, offering a compelling proposal to finally resolve the dispute. Allen argues that education plays a crucial role in the cultivation of political and social equality and economic fairness, but that we have lost sight of exactly what that role is and should be. Drawing on thinkers such as John Rawls and Hannah Arendt, she sketches out a humanistic baseline that re-links education to equality, showing how doing so can help us reframe policy questions. From there, she turns to civic education, showing that we must reorient education's trajectory toward readying students for lives as democratic citizens. Deepened by commentaries from leading thinkers Tommie Shelby, Marcelo Suárez-Orozco, Michael Rebell, and Quiara Alegría Hudes that touch on issues ranging from globalization to law to linguistic empowerment, this book offers a critical clarification of just how important education is to democratic life, as well as a stirring defense of the humanities.

education circle cambridge ma: Shaping Education Policy Douglas E. Mitchell, Robert L. Crowson, Dorothy Shipps, 2011-06 Shaping Education Policy is a comprehensive overview of education politics and policy during the most turbulent and rapidly changing period in American history. Respected scholars review the history of education policy to explain the political powers and processes that shape education today. Chapters cover major themes that have influenced education, including the civil rights movement, federal involvement, the accountability movement, family choice, and development of nationalization and globalization. Sponsored by the Politics of Education Association, this edited collection examines the tumultuous shifts in education policy over the last six decades and projects the likely future of public education. This book is a necessary resource for understanding the evolution, current status, and possibilities of educational policy and politics.

education circle cambridge ma: Thinking Practices in Mathematics and Science

Learning James G. Greeno, Shelley V. Goldman, 2013-04-03 The term used in the title of this volume--thinking practices--evokes questions that the authors of the chapters within it begin to answer: What are thinking practices? What would schools and other learning settings look like if they were organized for the learning of thinking practices? Are thinking practices general, or do they differ by disciplines? If there are differences, what implications do those differences have for how we organize teaching and learning? How do perspectives on learning, cognition, and culture affect the kinds of learning experiences children and adults have? This volume describes advances that have been made toward answering these questions. These advances involve several agendas, including increasing interdisciplinary communication and collaboration; reconciling research on cognition with research on teaching, learning, and school culture; and strengthening the connections between research and school practice. The term thinking practices is symbolic of a combination of theoretical perspectives that have contributed to the volume editors' understanding of how people learn, how they organize their thinking inside and across disciplines, and how school learning might be better organized. By touring through some of the perspectives on thinking and learning that have evolved into school learning designs, Greeno and Goldman begin to establish a frame for what they are calling thinking practices. This volume is a significant contribution to a topic that they believe will continue to emerge as a coherent body of scientific and educational research and practice.

education circle cambridge ma: We Are the Ones We Have Been Waiting For Peter Levine, 2013-10-07 Chronic unemployment, deindustrialized cities, and mass incarceration are among the grievous social problems that will not yield unless American citizens address them. Peter Levine's We Are the Ones We Have Been Waiting For is a primer for anyone motivated to help revive our fragile civic life and restore citizens' public role. After offering a novel theory of active citizenship, a diagnosis of its decline, and a searing critique of our political institutions, Levine—one of America's most influential civic engagement activists—argues that American citizens must address our most challenging issues. People can change the norms and structures of their own communities through deliberative civic action. He illustrates rich and effective civic work by drawing lessons from YouthBuild USA, Everyday Democracy, the Industrial Areas Foundation, and many other civic groups. Their organizers invite all citizens—including traditionally marginalized people, such as low-income teenagers—to address community problems. Levine explores successful efforts from communities across America as well as from democracies overseas. He shows how cities like Bridgeport, CT and Allentown, PA have bounced back from the devastating loss of manufacturing jobs by drawing on robust civic networks. The next step is for the participants in these local efforts to change policies that frustrate civic engagement nationally. Filled with trenchant analysis and strategies for reform, We Are the Ones We Have Been Waiting For analyzes and advocates a new citizen-centered politics capable of tackling problems that cannot be fixed in any other way.

education circle cambridge ma: Evidence, Politics, and Education Policy Lorraine M. McDonnell, M. Stephen Weatherford, 2021-02-01 In Evidence, Politics, and Education Policy, political scientists Lorraine M. McDonnell and M. Stephen Weatherford provide an original analysis of evidence use in education policymaking to help scholars and advocates shape policy more effectively. The book shows how multiple types of evidence are combined as elected officials and their staffs work with researchers, advocates, policy entrepreneurs, and intermediary organizations to develop, create, and implement education policies. Evidence, Politics, and Education Policy offers an in-depth understanding of the political environment in which evidence is solicited and used. Two key case studies inform the book's findings. The primary case—a major, multimethod study—examines the development and early implementation of the Common Core State Standards at the national level and in four states: California, Indiana, Massachusetts, and Tennessee. A comparative case analyzes the evidence used in Congressional hearings over the twenty-year history of the Children's Health Insurance Program. Together, the two cases illustrate the conditions under which different types of evidence are used and, in particular, how federalism, the complexity of the policy problem, and the policy's maturity shape evidence use. McDonnell and Weatherford focus on

three leverage points for strengthening the use of research evidence in education policy: integrating research findings with value-based policy ideas; designing policies with incentives for research use built into their rules and organizational structures; and training policy analysts to promote the use of research in policymaking venues.

education circle cambridge ma: Beyond the Bubble Test Linda Darling-Hammond, Frank Adamson, 2014-06-16 Performance assessment is a hot topic in school systems, and educators continue to analyze its costs, benefits, and feasibility as a replacement for high-stakes testing. Until now, researchers and policymakers have had to dig to find out what we know and what we still have to learn about performance assessment. *Beyond the Bubble Test: How Performance Assessments Support 21st Century Learning* synthesizes the latest findings in the field, and not a moment too soon. Statistics indicate that the United States is in danger of falling behind if it fails to adapt to our changing world. The memory and recall strategies of traditional testing are no longer adequate to equip our students with the skills they need to excel in the global economy. Instead teachers need to engage students in deeper learning, assessing their ability to use higher-order skills. Skills like synthesizing information, understanding evidence, and critical problem-solving are not achieved when we teach to multiple-choice exams. Examples in *Beyond the Bubble Test* paint a useful picture of how schools can begin to supplement traditional tests with something that works better. This book provides new perspectives on current performance assessment research, plus an incisive look at what's possible at the local and state levels. Linda Darling-Hammond, with a team of leading scholars, bring together lessons learned, new directions, and solid recommendations into a single, readily accessible compendium. *Beyond the Bubble Test* situates the current debate on performance assessment within the context of testing in the United States. This comprehensive resource also looks beyond our U.S. borders to Singapore, Hong Kong, and other places whose reform-mindedness can serve as an example to us.

collective expertise of language scholars and educators in a variety of subdisciplines, the Handbook for Arabic Language Teaching Professionals in the 21st Century, Volume II, provides a comprehensive treatment of teaching and research in Arabic as a second and foreign language worldwide. Keeping a balance among theory, research and practice, the content is organized around 12 themes: Trends and Recent Issues in Teaching and Learning Arabic Social, Political and Educational Contexts of Arabic Language Teaching and Learning Identifying Core Issues in Practice Language Variation, Communicative Competence and Using Frames in Arabic Language Teaching and Learning Arabic Programs: Goals, Design and Curriculum Teaching and Learning Approaches: Content-Based Instruction and Curriculum Arabic Teaching and Learning: Classroom Language Materials and Language Corpora Assessment, Testing and Evaluation Methodology of Teaching Arabic: Skills and Components Teacher Education and Professional Development Technology-Mediated Teaching and Learning Future Directions The field faces new challenges since the publication of Volume I, including increasing and diverse demands, motives and needs for learning Arabic across various contexts of use; a need for accountability and academic research given the growing recognition of the complexity and diverse contexts of teaching Arabic; and an increasing shortage of and need for quality of instruction. Volume II addresses these challenges. It is designed to generate a dialogue—continued from Volume I—among professionals in the field leading to improved practice, and to facilitate interactions, not only among individuals but also among educational institutions within a single country and across different countries.

education circle cambridge ma: *The Politics of Civic Education* Eleni M. Mantas-Kourounis, 2024-06-10 This book chronicles the progression of civic education advocacy since the early 2000s. It identifies the main actors that called for civic education reform, describes their motivations and policy platforms, and documents the path taken to capture state policy agendas. It argues that No Child Left Behind incentivized civic education advocates to mobilize a “call to action” to restore emphasis on civics that materialized into national policy reform proposals that successfully captured the agendas of state legislatures and bureaucracies. This book analyzes the implementation and sustainability of these civic education policy reforms by undertaking a comparative case study analysis of school districts in Utah and Connecticut. Through the voices of teachers and district administrators, the book tells the story of what happened when these state policy reforms inspired by national initiatives hit the local level where the rubber meets the road. As ideological debates about schools and democracy unfold across the country, as civic education advocates and proposals proliferate, this book treats civic education not as panacea but as a concrete policy area to be analyzed and understood. It contextualizes the current debate and offers a critical assessment of the most recent, comprehensive state-level civic education policy reform. It argues that while questions linger about what type of civic-inspired educational interventions remains most effective for whom, where, and why, the implementation of such interventions are profoundly impacted by local actors and local politics and that future initiatives should take this dimension into consideration.

education circle cambridge ma: *Reconstructing Agency in Developmental and Educational Psychology* Paul Downes, 2019-09-05 This book reconstructs the foundations of developmental and educational psychology and fills an important gap in the field by arguing for a specific spatial turn so that human growth, experience and development focus not only on time but space. This regards space not simply as place. Highlighting concrete cross-cultural relational spaces of concentric and diametric spatial systems, the book argues that transition between these systems offers a new paradigm for understanding agency and inclusion in developmental and educational psychology, and for relating experiential dimensions to causal explanations. The chapters examine key themes for developing concentric spatial systemic responses in education, including school climate, bullying, violence, early school leaving prevention and students’ voices. Moreover, the book proposes an innovative framework of agency as movement between concentric and diametric spatial

relations for a reconstruction of resilience. This model addresses the vital neglected issue of resistance to sheer cultural conditioning and goes beyond the foundational ideas of Bronfenbrenner's ecological systems theory, as well as Vygotsky, Skinner, Freud, Massey, Bruner, Gestalt and postmodern psychology to reinterpret them in dynamic spatial systemic terms. Written by an internationally renowned expert, this book is a valuable resource for academics, researchers and postgraduate students in the areas of educational and developmental psychology, as well as related areas such as personality theory, health psychology, social work, teacher education and anthropology.

education circle cambridge ma: Educational Change and the Political Process Dana L. Mitra, 2017-11-28 Educational Change and the Political Process brings together key ideas on both the system of educational policy and the policy process in the United States. It provides students with a broad, methodical understanding of educational policy. No other textbook offers as comprehensive a view of the U.S. educational policy procedure and political systems. Section I discusses the actors and systems that create and implement policy on both the federal and the local level; Section II walks students through the policy process from idea to implementation to evaluation; and Section III delves into three major forces driving the creation of educational policies in the current era—accountability, equity, and market-driven reforms. Each chapter provides case studies, discussion questions, and classroom activities to scaffold learning, as well as a bibliography for further reading to deepen exploration of these topics.

They were a force in the changes that swept Chinese society, bridging Chinese and Western ideals, empowering women, and contributing to rural modernization. This innovative account examines the social and political aspects and impacts of these schools, their role in a society in transition, and their production of grassroots forces that lead to the Communist Revolution.

education circle cambridge ma: Architecture's Disability Problem Wanda Katja Liebermann, 2024-06-21 Architecture's Disability Problem explores the intersection of architecture and disability in the United States from the perspective of professional practice. This book uncovers why, despite the profound effect of the Americans with Disabilities Act on the architectural profession, there has been so little interest in design for disability in mainstream architecture. To counter this, the book investigates alternative approaches to designing with disability, through three case studies. These showcase both buildings and how design processes driven by disabled people shape design and professional roles. Combining historical research, formal and discourse analysis, and interviews with people who design, construct, use buildings, and advocate for access, the book develops a social understanding of how the buildings work at functional, affective, and symbolic levels. Architecture's Disability Problem is aimed at three primary readers: practicing architects, architectural scholars, and members of disability scholar-activist communities. Grounded in detailed design studies, the

author hopes to unearth the social meaning-making of architecture related to disability. Ultimately, the book makes an argument for a focus on disability in its own right—as well as on the body—in place of the dominance of formal, object-oriented approaches. This book presents and argues for a fundamental shift in the way architectural education, policy, and practice views and engages with disability. It will be key reading for students, researchers, practitioners and policy-makers.

education circle cambridge ma: Research in Early Childhood Science Education Kathy Cabe Trundle, Mesut Saçkes, 2015-04-15 This book emphasizes the significance of teaching science in early childhood classrooms, reviews the research on what young children are likely to know about science and provides key points on effectively teaching science to young children. Science education, an integral part of national and state standards for early childhood classrooms, encompasses not only content-based instruction but also process skills, creativity, experimentation and problem-solving. By introducing science in developmentally appropriate ways, we can support young children's sensory explorations of their world and provide them with foundational knowledge and skills for lifelong science learning, as well as an appreciation of nature. This book emphasizes the significance of teaching science in early childhood classrooms, reviews the research on what young children are likely to know about science, and provides key points on effectively teaching young children science. Common research methods used in the reviewed studies are identified, methodological concerns are discussed and methodological and theoretical advances are suggested.
