1800 highway 17 business garden city sc 29576: *Myrtle Beach Pavilion* Lesta Sue Hardee, Janice McDonald, 2010 For almost a century, the heart of Myrtle Beach was defined by a place simply called the Pavilion. From the original structure built in 1908, the Pavilion was the center of the resort town's growing tourism industry. It was a destination point for anyone coming to the Grand Strand. Here you could stroll the Boardwalk, play arcade games, make faces in fun mirrors, ride rides, dance the Carolina Shag, or sit on a bench and watch everyone else do all of the above. The Pavilion underwent several incarnations. The first ones were wooden and vulnerable, but the final was concrete and seemingly indestructible, standing for nearly 60 years. Hardly an architectural marvel, what the Pavilion lacked in grandeur, it made up for in pure old-fashioned fun. The beloved structure and its rides fell prey to economics and a wrecking ball in 2006. Myrtle Beach natives Lesta Sue Hardee and Janice McDonald trace the origins of the Pavilion from its early days as a recreational site for guests of Myrtle Beach's first hotel, the Sea Side Inn, to its heyday as the location for beach activities on the East Coast, and finally to the Pavilion's Farewell Season. The Images of America series celebrates the history of neighborhoods, towns, and cities across the country. Using archival photographs, each title presents the distinctive stories from the past that shape the character of the community today. As interest in nature travel increases, so does concern for conservation of the environment and the well-being of local peoples and cultures. Appalachia seems an ideal destination for ecotourists, with its rugged mountains, uniquely diverse forests, wild rivers, and lively arts culture. And ecotourism promises much for the region: protecting the environment while bringing income to disadvantaged communities. But can these promises be kept? Ecotourism in Appalachia examines both the potential and the threats that tourism holds for Central Appalachia. The authors draw lessons from destinations that have suffered from the tourist trap syndrome, including Nepal and Hawaii. They conclude that only carefully regulated and locally controlled tourism can play a positive role in Appalachia's economic development.

Howell, 2015-06-16 One major consequence of climate change is abrupt, dramatic changes in regional biodiversity. Even if the most optimistic scenarios for mitigating climate change transpire, the fate of many wild species rests on the shoulders of people engaged in conservation planning, management, and policy. Providing managers with the latest and most useful climate change research is critical and requires challenging the conventional divide between scientists and managers. *Biodiversity in a Changing Climate* promotes dialogue among scientists, decision makers, and managers who are grappling with climate-related threats to species and ecosystems in diverse forms. The book includes case studies and best practices used to address impacts related to climate change across a broad spectrum of species and habitats—from coastal krill and sea urchins to prairie grass and mountain bumblebees. Focused on California, the issues and strategies presented in this book will prove relevant to regions across the West, as well as other regions, and provide a framework for how scientists and managers in any region can bridge the communication divide to manage biodiversity in a rapidly changing world. *Biodiversity in a Changing Climate* will prove an indispensable guide to students, scientists, and professionals engaged in conservation and resource management.

Carolina, 1940-2000 Henry H. Lesesne, 2001 Describes the transformation of one of the nation's oldest public institutions of higher learning into a modern research university The history of the modern University of South Carolina (originally chartered as South Carolina College in 1801) describes the significant changes in the state and in the character of higher education in South Carolina. World War II, the civil rights struggle, and the revolution in research and South Carolina's economy transformed USC from a small state university in 1939, with a student body of less than 2,000 and an annual budget of \$725,000, to a 1990 population of more than 25,000 and an annual budget of \$454 million. Then the University was little more than a small liberal arts college; today the university is at the head of a statewide system of higher education with eight branch campuses. Henry H. Lesesne recounts the historic transformation of USC into a modern research university, grounding that change in the context of the modernization of South Carolina and the South in general. The half century from 1940 to 1990 wrought great changes in South Carolina and its most prominent university. State and national politics, the challenges of funding modern higher educations, and the explosive growth of intercollegiate sports are among other elements of the University that were transformed. Lesesne describes with candor and impressive research how the University of South Carolina and, indeed, all of the state's higher education system emerged from a past limited by racism and poverty and began to measure its aspirations by national educational standards.
