Gonadotropin Laurence A. Cole, Stephen A. Butler, 2020-02-07 100 years of Human Chorionic Gonadotropin: Reviews and New Perspectives is a collection of articles written by some of the world's leading experts on the pregnancy hormone and cancer marker hCG. In 2019 it is difficult to ignore the effect that our understanding of hCG has had on the lives of millions of people worldwide. The hCG immunoassay, in one form or another, is now one of the most common medical tests conducted and is often the first indication that a mother-to-be is pregnant. Not only a marker of pregnancy, hCG is utilized in the diagnosis and monitoring in oncology and presents a potential target for novel cancer therapeutics. 100 years ago, in 1919, Hirose was demonstrating gonadotropic functions which resulted from a chorionic factor. Over the last century this factor has become defined as hCG and more recently explored as not one molecule but a group of molecules with variable structure and variable functions in both pregnancy and cancer. hCG is a multi-faceted molecule that has clinical and therapeutic implications but can be a challenging topic for researchers and physicians alike. This text covers the different structures and functions of hCG exploring the genes and evolution of the molecule, the different protein and glycosylation structures which can exist and their effect on structure, detection and quantification. 100 Years of hCG is not an attempt to recount the history of every publication on hCG, but rather a collection of reviews and new perspectives by hCG-ologists, the term used by Hussa to describe biochemists working on HCG in the first book written on the topic over 30 years ago. Some of the authors have been around a while, some not so long, but others are just beginning their journey with a most beguiling molecule. -

Provides updated information on a complex and changing subject in five sections - Reviews historical perspectives and developments over the last 100 years - Includes novel insights into the structure, function and detection of hCG in pregnancy and cancer - Includes chapters on the use of mass spectrometry to detect and quantify hCG as well as traditional immunoassays and over the counter pregnancy tests - Describes the role of hCG in pregnancy, endometrial receptivity and embryo implantation and the use in fertility treatment - Addresses the specific hyperglycosylated hCG test that can distinguish a normal term from a failing pregnancy and also screen for preeclampsia and gestational hypertension in pregnancy as well as its use as a marker and treatment target in cancer. - Includes chapters on the development and use of hCG vaccines - Includes a section on hCG and in subunits in cancer

1st response digital pregnancy test instructions: Transforming the Workforce for Children Birth Through Age 8 National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on the Science of Children Birth to Age 8: Deepening and Broadening the Foundation for Success, 2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

1st response digital pregnancy test instructions: TIP 35: Enhancing Motivation for Change in Substance Use Disorder Treatment (Updated 2019) U.S. Department of Health and Human Services, 2019-11-19 Motivation is key to substance use behavior change. Counselors can support clients' movement toward positive changes in their substance use by identifying and enhancing motivation that already exists. Motivational approaches are based on the principles of person-centered counseling. Counselors' use of empathy, not authority and power, is key to enhancing clients' motivation to change. Clients are experts in their own recovery from SUDs. Counselors should engage them in collaborative partnerships. Ambivalence about change is normal. Resistance to change is an expression of ambivalence about change, not a client trait or characteristic. Confrontational approaches increase client resistance and discord in the counseling relationship. Motivational approaches explore ambivalence in a nonjudgmental and compassionate way.

1st response digital pregnancy test instructions: *The Mama Natural Week-by-Week Guide to Pregnancy and Childbirth* Genevieve Howland, 2017-04-25 From the popular YouTube channel Mama Natural, this is the first week-by-week natural pregnancy book for soon-to-be moms. For the last half-century, control over childbirth has been in favor of doctors. Many pregnancy guidebooks are conventional, fear-based, and written by male physicians deeply entrenched in the old-school medical model of birth. But change is underway. A groundswell of women are taking back their pregnancy and childbirth and embracing a natural way. Genevieve Howland, the woman behind the enormously popular Mama Natural blog and YouTube channel, has created an inspiring, fun, and informative guide that demystifies natural pregnancy and walks mom through the process one week at a time. The Mama Natural's Week-by-Week Guide to Pregnancy and Childbirth is the modern (and yet ancient) approach to pregnancy and childbirth. "Natural" recognizes that pregnancy and birth are normal, and that having a baby is a wondrous biological process and rite of passage—not a medical condition. This book draws upon the latest research showing how beneficial and life-changing natural birth is for both babies and moms. Full of weekly advice and tips for a healthy pregnancy, Howland details vital nutrition to take, natural remedies for common and troublesome symptoms, as well as the appropriate (and inappropriate) use of interventions. Peppered throughout are positive birth and pregnancy stories from women of all backgrounds (and all stages of their natural journey) along with advice and insights from a Certified Nurse Midwife (CNM) plus a Registered Nurse (RN), doula, and lactation consultant. Encouraging, well-researched, and fun, The Mama Natural's Week-by-Week Guide to Pregnancy and Childbirth will be an essential companion for women everywhere to embrace natural pregnancy and reap all the benefits for both baby and mama.

1st response digital pregnancy test instructions: Human Dimension and Interior Space Julius Panero, Martin Zelnik, 2014-01-21 The study of human body measurements on a comparative basis is known as anthropometrics. Its applicability to the design process is seen in the physical fit, or interface, between the human body and the various components of interior space. Human Dimension and Interior Space is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors, including interior designers, architects, furniture designers, builders, industrial designers, and students of design. The use of anthropometric data, although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process. This comprehensive overview of anthropometrics consists of three parts. The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people. It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established. The second part contains easy-to-read, illustrated anthropometric tables, which provide the most current data available on human body size, organized by age and percentile groupings. Also included is data relative to the

range of joint motion and body sizes of children. The third part contains hundreds of dimensioned drawings, illustrating in plan and section the proper anthropometrically based relationship between user and space. The types of spaces range from residential and commercial to recreational and institutional, and all dimensions include metric conversions. In the Epilogue, the authors challenge the interior design profession, the building industry, and the furniture manufacturer to seriously explore the problem of adjustability in design. They expose the fallacy of designing to accommodate the so-called average man, who, in fact, does not exist. Using government data, including studies prepared by Dr. Howard Stoudt, Dr. Albert Damon, and Dr. Ross McFarland, formerly of the Harvard School of Public Health, and Jean Roberts of the U.S. Public Health Service, Panero and Zelnik have devised a system of interior design reference standards, easily understood through a series of charts and situation drawings. With *Human Dimension and Interior Space*, these standards are now accessible to all designers of interior environments.

1st response digital pregnancy test instructions: Care at the Close of Life: Evidence and Experience Stephen J. McPhee, Margaret A. Winker, Michael W. Rabow, Steven Z. Pantilat, Amy J. Markowitz, 2010-10-04 From one of the world's leading medical journals comes the definitive evidence-based, full-color guide to end-of-life and palliative care ...represents an important milestone in the evolution of care for people with advanced disease—for which its editors and authors and JAMA should be rightly proud. It is wonderful that JAMA had the foresight to publish a series on this topic, which, as medicine has become more technologically advanced and subspecialized, is often overlooked and, sometimes worse, avoided....this book will be invaluable for front-line clinicians, and indeed all health care practitioners—as care at the close of life is a part of almost all of medicine's specialties and settings.—Irene J. Higginson, BMBS, PhD, FPPHM, FRCP; Dept. of Palliative Care, Policy, & Rehabilitation; Cicely Saunders Institute; King's College London (from the foreword) A new addition to the JAMA evidence series, Care at the Close of Life: Evidence and Experience offers evidence-based and clinical expert guidance on caring for patients with life-limiting illness, incorporating the words and perspectives of affected patients, their families, and treating clinicians. Organized by these actual clinical cases, the book is based on the acclaimed 7-year series of 42 articles, originally published in JAMA as “Perspectives on Care at the Close of Life,” and now thoroughly updated as chapters and featuring extensive never-before-published material. Care at the Close of Life covers a wide range of clinical syndromes, disease processes, communication challenges, health-care delivery settings, and issues faced by patients, including withdrawal of dialysis and other life-sustaining measures, cross-cultural approaches, and the role of chemotherapy. Throughout the book, emphasis is on the principles of palliative care, with the patient and family at the center of care, and with attention given to all problems—physical, psychological, social, and spiritual. Reflecting this focus, each chapter begins with a patient case study to introduce the clinical problem, followed by “perspectives” that draw on extensive, real-world dialogue between clinicians, patients, and families. Internationally renowned authors then review the typical challenges illustrated by the case, offering state-of-the-art, evidence-based assessment and treatment approaches. Features Fully revised and updated text with new evidence and references, including the search methodology for each chapter's update Evidence-based orientation presents the current state of knowledge in the care of terminally ill patients and support for their families and caregivers Practical clinical guidance and approaches from international experts in palliative care Self-assessment Q&A, for reinforcing your knowledge of each chapter's content and for preparing for exams A useful Glossary of acronyms, terms, and tests Updated Resources for each chapter offer current, authoritative sources of diagnostic and treatment information that can help you optimize palliative care Medline PubMed ID numbers facilitate quick, convenient access to references
