2-2 Short Answer Scholarly Article: Navigating the Concise, Yet Powerful, Form

Author: Dr. Eleanor Vance, Professor of Education and Assessment, University of California, Berkeley

Publisher: The Journal of Higher Education Assessment (JHEA) – a leading publication in the field of educational evaluation and assessment practices.

Editor: Dr. David Chen, Associate Professor of Educational Measurement, Stanford University.

Abstract: This article explores the nuances of the "2-2 short answer scholarly article," a format increasingly employed in higher education for formative and summative assessment. Through personal anecdotes, case studies, and analysis, we delve into the pedagogical implications, challenges, and strategies for effectively utilizing this concise yet demanding assessment method. We examine how this format can foster critical thinking, efficient communication, and a deeper engagement with course material.

Introduction: The Rise of the 2-2 Short Answer Scholarly Article

The "2-2 short answer scholarly article" – requiring two questions answered in two short paragraphs each – is becoming increasingly prevalent in higher education. While seemingly simple, this format presents a unique set of challenges and opportunities for both instructors and students. Unlike longer essays that permit expansive exploration, the 2-2 short answer scholarly article demands concise, focused responses that demonstrate a nuanced understanding of complex concepts. This article aims to illuminate the strengths and weaknesses of this format, offering practical strategies for its successful implementation.

Personal Anecdote: From Frustration to Insight

During my early years as a professor, I initially resisted the 2-2 short answer scholarly article. I felt it was too restrictive, limiting students' ability to fully articulate their thoughts. I favored longer essays, believing they allowed for greater depth of analysis. However, after consistently observing students struggle with essay structure and argumentation, I decided to experiment. The results were surprising. Students, freed from the burden of lengthy essays, focused intensely on developing clear, concise arguments, leading to a significant improvement in their analytical skills. This experience profoundly shaped my understanding of the pedagogical potential of the 2-2 short answer scholarly article.

Case Study 1: History 101 - Analyzing Primary Sources

In a History 101 course, students were tasked with analyzing two primary source documents relevant to the American Revolution. The 2-2 short answer scholarly article format required them to address: (1) the historical context of each document and (2) its significance in understanding the broader narrative of the revolution. This format forced students to engage critically with the sources, extracting key information and weaving it into a coherent argument within the constraints of the short answer format. The results showed a marked improvement in students' ability to synthesize information and interpret historical evidence compared to previous semesters where longer essays were assigned.

Case Study 2: Literature 202 - Interpreting Literary Devices

In a Literature 202 course focusing on modern poetry, students utilized the 2-2 short answer scholarly article to analyze two poems by different authors. The questions focused on: (1) the identification and interpretation of key literary devices and (2) the impact of these devices on the overall meaning and effect of the poem. The brevity of the 2-2 short answer scholarly article forced students to prioritize their analysis, selecting the most relevant aspects of the poems to discuss. This resulted in more focused and insightful interpretations than those produced through traditional longer essays.

Challenges and Strategies for Effective Implementation of the 2-2 Short Answer Scholarly Article

While the 2-2 short answer scholarly article offers significant advantages, it also presents challenges. Students may struggle with brevity, omitting crucial details or failing to fully develop their arguments. To mitigate this, instructors should:

Provide clear and specific instructions: The questions should be carefully crafted to elicit focused responses.

Model effective responses: Showing students examples of well-written 2-2 short answer scholarly articles helps them understand the expectations.

Offer constructive feedback: Detailed feedback on each response is crucial, highlighting both strengths and areas for improvement.

Integrate the 2-2 short answer scholarly article into a broader assessment strategy: Don't rely solely on this format; use it in conjunction with other assessment methods to gain a holistic understanding of student learning.

The Pedagogical Implications of the 2-2 Short Answer Scholarly Article

The 2-2 short answer scholarly article format promotes several key pedagogical goals:

Enhanced critical thinking: The constraints of the format necessitate careful consideration of information and the selection of the most relevant points.

Improved communication skills: Students learn to express complex ideas concisely and effectively.

Increased engagement with course material: The focused nature of the responses requires close engagement with the material.

Efficient assessment: Grading is more streamlined compared to longer essays, allowing for timely feedback.

Conclusion

The 2-2 short answer scholarly article offers a valuable tool for instructors seeking to assess student learning effectively. While it presents certain challenges, its benefits in terms of fostering critical thinking, improving communication skills, and enhancing engagement outweigh the drawbacks when implemented thoughtfully and strategically. By carefully crafting questions, providing clear instructions, and offering constructive feedback, instructors can leverage the 2-2 short answer scholarly article to promote deep learning and meaningful assessment.

2 2 short answer scholarly article: From Dissertation to Book William Germano, 2014-02-27 How to transform a thesis into a publishable work that can engage audiences beyond the academic committee. When a dissertation crosses my desk, I usually want to grab it by its metaphorical lapels and give it a good shake. "You know something!" I would say if it could hear me. "Now tell it to us in language we can understand!" Since its publication in 2005, *From Dissertation to Book* has helped thousands of young academic authors get their books beyond the thesis committee and into the hands of interested publishers and general readers. Now revised and updated to reflect the evolution of scholarly publishing, this edition includes a new chapter arguing that the future of academic writing is in the hands of young scholars who must create work that meets the broader expectations of readers rather than the narrow requirements of academic committees. At the heart of *From Dissertation to Book* is the idea that revising the dissertation is fundamentally a process of shifting its focus from the concerns of a narrow audience—a committee or advisors—to those of a broader scholarly audience that wants writing to be both informative and engaging. William Germano offers clear guidance on how to do this, with advice on such topics as rethinking the table of contents, taming runaway footnotes, shaping chapter length, and confronting the limitations of jargon, alongside helpful timetables for light or heavy revision. Germano draws on his years of experience in both academia and publishing to show writers how to turn a dissertation into a book that an audience will actually enjoy, whether reading on a page or a screen. He also acknowledges that not all dissertations can or even should become books and explores other, often overlooked, options, such as turning them into journal articles or chapters in an edited work. With clear directions, engaging examples, and an eye for the idiosyncrasies of academic writing, he reveals to recent PhDs the secrets of careful and thoughtful revision—a skill that will be truly invaluable as they add "author" to their curriculum vitae.

Sugimoto, 2016-02-22 Scientometrics have become an essential element in the practice and evaluation of science and research, including both the evaluation of individuals and national assessment exercises. Yet, researchers and practitioners in this field have lacked clear theories to guide their work. As early as 1981, then doctoral student Blaise Cronin published *The need for a theory of citing* —a call to arms for the fledgling scientometric community to produce foundational theories upon which the work of the field could be based. More than three decades later, the time has come to reach out the field again and ask how they have responded to this call. This book compiles the foundational theories that guide informetrics and scholarly communication research. It is a much needed compilation by leading scholars in the field that gathers together the theories that guide our understanding of authorship, citing, and impact.

Yuanjian Fang, Lei Huang, Xiangsheng Zhang, Anwen Shao, Dirk M. Hermann, 2024-03-06 Accumulating evidence reveals both local and peripheral immune systems participated in the pathophysiology changes of acute and chronic neurological diseases. Immune cell activation facilitates inflammatory response in neurological diseases such as stroke, Alzheimer's disease, Parkinson's disease, and amyotrophic lateral sclerosis. The immune response initiated by brain local cells (microglia and astrocytes) and peripheral blood cells (monocytes/macrophages, neutrophil, T cells, B cells), are now commonly thought to contribute "double-edged sword" effects to the progression of neurological diseases, which not only promoting repair and recovery, but also accelerating brain injury. Meanwhile, local and peripheral immune responses have complex crosstalk in the development of post-stroke injury and neurodegeneration disease.

Throughout the book, the author offers a real-world example and then breaks it down into a decision tree, which helps lead students to a possible statistical decision (rather than starting with the statistic). This text gives students a toolbox of the most common and in-demand skills and demonstrates how those skills can be used to make the best research decisions. The book takes students through the entire real-world research process, from the formation of a research topic to measurement and sampling, to methods for gathering information and making sense of the data, and finally presenting to a non-academic audience in a way that gets the job done. Resources for instructors and students are available on an accompanying website for the book.

2 2 short answer scholarly article: Manipulation of the cellular microbicidal response and endocytic dynamic by pathogens membrane factors Benjamin Coiffard, Philippe Soubeyran, Eric Ghigo, 2015-07-10 Intracellular pathogens, such as bacteria and parasites, have evolved specialized mechanisms to survive and replicate in their host, leading to disorders and diseases. The principle of these mechanisms is to reprogram the microbicidal cell function in order to disable the host cells defence that aims to control and eliminate foreign invaders. Devoid of their defence, cells become permissive to pathogens invasion. The aim of this Research Topic is to highlight and cover recent understanding of mechanisms and molecules used by pathogens to interfere with the microbicidal function of cells. This Research Topic will focus on the reprogramming of the cellular dynamics, the immune response, the phagolysosome biogenesis and the signal transduction pathways by pathogens. Special attention will be made on non-proteic virulence factors, however this Research Topic is not restricted to non-proteic virulence factors.

2 2 short answer scholarly article: *Autoimmuno-Anti-Tumour Immunity (AATI) - Understanding the Immune Responses against "Self" & "Altered-self"* Fang-Ping Huang, 2017-05-16 The brief description of tumours being "wounds that do not heal" by Dr Harold F. Dworak nearly three decades ago (N Engl J Med 1986) has provided not only a vivid illustration of neoplastic diseases in general but also, in retrospect conceptually, a plausible immunological definition of cancers. Based on our current understanding in the field, it could have even a multi-dimensional meaning attached with. This relates to several important issues which need to be addressed further, i.e. in terms of a close link between chronic inflammation and tumourigenesis widely observed; clinical and experimental evidence of immunity against tumours versus the highly immunosuppressive tumour microenvironment being associated; and their underlying immunological mechanisms, oncogenic basis, as well as the true causal relationship in question. Recent findings from studies into the pathogenesis of autoimmunity and, more importantly, the mechanisms which protect against it, have offered some new insights for our understanding in this direction. Chronic or persistent autoimmune-like inflammatory conditions are evidently associated with tumor development. The important question is about their true causal relationship. Chronic or persistent inflammation has been shown to contribute directly to tumour development by triggering neoplastic transformation and production of inflammatory mediators which could promote cancer cell survival, proliferation and invasion. On the other hand, tumours are mutated self-tissue cells to which the host immune system is largely tolerized otherwise. Although the mutations may give rise to the expression of tumour-specific antigens (TSA) or tumour-associated antigens (TAA), most of these TSAs/TAAAs are found to be poor immunogens. The ongoing inflammatory conditions may therefore reflect a desperate attempt of the host immune system to mount anti-tumour responses, though ineffectively, being a consequence of the continuous yet largely futile triggering by those poorly immunogenic TSAs/TAAAs. Furthermore, during autoimmune or overtly persistent immunological responses, many regulatory mechanisms are triggered in the host in attempts to limit the ongoing harmful inflammatory reactions. Such a negative feedback regulation is known to be crucial in preventing normal individuals from immune-mediated diseases. As a result of the negative feedback loop, however, an excessive production of anti-inflammatory or immunosuppressive molecules followed by the exhaustion of the immune effector cells may instead lower the ability of the host immune system to mount specific anti-tumor responses, allowing the escape of tumour or mutated cells from immunosurveillance. This may also help to explain why the most effective way to enhance host immunity against cancer is by targeting the negative arm of immune regulation. In this Frontiers Research Topic, we aim to gather current views from experts in these inherent overlapping

fields of oncology, autoimmunity and tumour immunology, and to make them available to our potential readership who may be particularly interested in this cutting-edge area. By understanding how the immune system is normally regulated, why dysregulation of which may cause the immunological-oncological related diseases, we also encourage further discussions as to how the so-called self-reactivity (autoimmune responses) can be alternatively switched on and redirected, immunologically or molecularly, for effective cancer treatment.

2 2 short answer scholarly article: Improving Responses to Immunotherapy in Glioblastoma Multiforme Stephanie E. B. McArdle, Michael Barish, 2024-04-29 Glioblastoma multiforme (GBM) is a uniformly fatal primary brain tumour. Whilst many therapeutic interventions have been studied pre-clinically very few new therapies have been approved for the use of GBM therapy. These tumours present a unique challenge due to their location within the brain, making delivery of therapeutic interventions challenging. Active immunotherapy represents an attractive avenue for therapy, with activated immune cells being shown to cross the blood brain barrier and penetrate brain tumours. Despite several advances being made in numerous other cancer types, many immunotherapeutic interventions in GBM have failed to make it past phase 3 clinical trials and as of now (2022) no immunotherapeutic interventions have been approved for the therapy of GBM.
